## IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of:

Group Art Unit No.: 2157

Kevin E. Kalajan

Examiner: Burgess, Barbara N

Serial No.: 09/163,246

Filed on: September 29, 1998

For: HETEROGENEOUS NETWORK FILE  
ACCESSBox Amend  
Commissioner of Patents  
Washington, D.C. 20231**DECLARATION PURSUANT TO 37 C.F.R. §1.131**

I, Kevin E. Kalajan, declare the following:

(1) I am the sole inventor of the invention described and claimed in U.S.

Application No. 09/163,246.

(2) In the latter part of 1997, I worked on a project known as "Netfile" and "Netfile Manager". The purpose of the Netfile project was to implement the claimed invention in a product known as "Remote Passage Server". Exhibit A is an email dated October 27, 1997, in which my colleague, Burt Fujii, and I discussed certain aspects of the invention, including the accessing of files on the Unix, Windows 95/NT, and Novell file systems, and the high "IQ" features of file compression, mail-from-server, recursive search, upload, and create directory/folder.

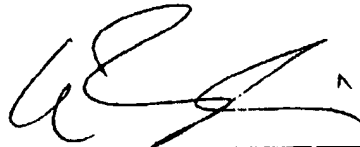

(3) In the early part of 1998, a version of the Remote Passage Server embodying the claimed invention was completed. This version of the Remote Passage Server was delivered to Boston College shortly thereafter. Exhibit B is a purchase order dated April

28, 1998, for the Remote Passage Server. Exhibit C is a shipping order indicating that the Remote Passage Server was shipped to Boston College on May 6, 1998. Since this version of the Remote Passage Server embodied the claimed invention, it follows that the claimed invention was actually reduced to practice no later, but possibly earlier, than May 6, 1998.

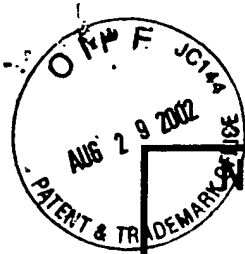

(4) All statements made herein of my own knowledge are true and all statements made on information and belief are believed to be true, and these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the above-referenced application or any patent issuing thereon.

they might like to see a list here...

e.g., "halt", "reboot", "admintool" functions, network diagnostics, routing administration, etc. the distinction might be more between the Solaris system's admin vs. the RP sysadmin...?

Clarification needed on the following:

DNS is what we use for name services, but the logical thing for Sun is NIS. "it would be nice", but i'd rather not promise it if we don't have to.

Likewise for user authentication, NIS would be logical and nice to have, but it's not called out for in the "spec", and we use Radius and local authentication.

there was no documentation specified.
